

Test Cases for Registration Page

Test Cases written

By

Shafiul Ajam Opee

1. Verify whether the registration page is accessible and appears when clicking on the "Sign Up" or "Register" link/button.
2. Verify that all required registration fields are present on the page (e.g., username, email, password, confirm password).
3. Verify the minimum and maximum length for each field.
4. Verify that appropriate labels or placeholders are provided for each registration input field.
5. Verify that the registration page elements align properly on different devices and screen resolutions.
6. Verify that the size, color, and UI of registration elements match the design specifications.
7. Verify the correctness of the registration page title.
8. Verify that the registration page includes relevant instructions or guidelines for users.
9. Verify that input validation occurs for each field (e.g., valid email format, password complexity).
10. Verify that the registration form includes a "Terms of Service" and "Privacy Policy" link, leading to the respective pages.
11. Verify that a user cannot proceed with registration if required fields are left empty.
12. Verify that the user receives an error message if the entered email address is already registered.
13. Verify that the user receives an error message if the password and confirm password fields do not match.
14. Verify the behavior when the user enters a weak password, and ensure appropriate error messaging.
15. Verify that the registration form includes a CAPTCHA or similar anti-bot mechanism.
16. Verify that clicking on the "Back to Login" link/button navigates the user back to the login page.
17. Verify that the user receives a confirmation email after successful registration.
18. Verify the email verification process, including verifying the correctness of the verification link.
19. Verify that the registration process is accessible and usable through keyboard navigation.
20. Verify that the user is automatically logged in after successful registration, or is redirected to the login page to log in.
21. Verify the responsiveness and alignment of the registration page on various devices and screen sizes.
