

		Test Cases for a User Profile Management		
		<i>Written by</i>		
		Shafiul Ajam Opee		
1	Verify that the user profile page is accessible from the main navigation menu.			
2	Verify that the user's profile information (e.g., name, email, profile picture) is displayed on the profile page.			
3	Verify that the user can edit their profile information, such as updating the name or profile picture.			
4	Verify that the changes made to the user's profile information are saved successfully.			
5	Verify that the system enforces any specified validation rules for updating profile information (e.g., minimum password length).			
6	Verify that the user can change their password from the profile page.			
7	Verify that the system enforces password strength requirements during a password change.			
8	Verify that the user receives a confirmation message or email after successfully updating their profile or password.			
9	Verify that the system provides an option to log out from the user profile page.			
10	Verify that the user profile page is responsive and works well on various screen sizes and devices.			
11	Verify that the system handles concurrent profile updates from different devices without conflicts.			
12	Verify that the user can recover their account through specified account recovery options (e.g., email verification).			
13	Verify the security measures in place to protect sensitive user information on the profile page.			
14	Verify that the user profile management system complies with relevant data protection.			
15	Verify that the user profile management system integrates seamlessly with other modules or systems, such as authentication and authorization services.
