		Test Cases for a User Profile Management				
		Written by				
		Shafiul Ajam Opee				
1		Verify that users can enable two-factor authentication for their accounts.				
2		Verify that users can disable two-factor authentication for their accounts.				
3		Verify that the system supports multiple 2FA methods (SMS, authenticator app, email).				
4		Verify that clear and concise instructions are provided to users during the 2FA setup process.				
5		Verify that users can successfully authenticate using the 2FA method they have set up.				
6		Verify that the system denies access if the user fails to provide the correct 2FA code.				
6		Verify that users are provided with and can securely store backup codes for 2FA authentication.				
7		Verify that 2FA codes are only valid for a limited time period.				
8		Verify that users who have lost access to their 2FA method can still recover their account through alternative means (email recovery).				
9		Verify that 2FA works seamlessly across different devices and platforms.				
10		Verify that users receive notifications when 2FA settings are changed.				
11		Verify that the system logs 2FA activities for security and audit purposes.				
12		Verify that the 2FA process integrates well with the account recovery process.				
13		Verify that users are provided with educational materials or guidance on the importance of 2FA and how to use it securely.				
14		Verify that the 2FA system is compatible with commonly used authenticator apps and third-party 2FA solutions.
